Problems

1. Scientists evaluated on where, not what, we publish to advance career (impact factors, journal titles).
2. Pressure to be first to publish means short-cuts are taken.
3. Reproducibility crisis ("p hacking").
4. Sharing data seen as giving away competitive advantage.
5. Commercial publishers taking over the research lifecycle.
Solutions

1. Sign DORA (Declaration on Research Assessment).

2. Commit to open science activities.

3. Support open-access journals as authors and reviewers.

4. Use preprint servers.

5. Make research more reproducible wherever possible.

6. Pre-register studies to minimise p-hacking.

7. Critically evaluate journal subscription model (“plan S”).

8. Give early career researchers a voice within Universities.
